Chemie Technik 4/22 April 22, 2022
neue verpackung 5/22 May 17, 2022

**CHEMIE
TECHNIK**
KOMPETENZ. ENTSCHEIDET.

**neue
verpackung**
Das Entscheidermagazin
für Verpackungsprozesse

Sustainability protects the environment – and it sells! This aspect is playing an increasingly important role not only at the point of sale but also in classic industrial packaging. After all, if you want to set your company on climate-neutral grounds, you have to take into account the packaging materials used – whether in intralogistics or for global transport – and should address the issue holistically and along the entire value chain.

The **Sustainable Industrial Packaging Special** of the trade magazines **Chemie Technik** and **neue verpackung** [engl. new packaging] is addressed to investment decision-makers in chemical plant engineering and the packaging industry and offers you a perfect platform to present your products and innovations to a wide audience.

Key topics

- Reusable or disposable solutions, for example in the field of bulk packaging and grid tanks for liquid and free-flowing substances
- Palletizing – selection of sustainable materials and stretch films
- The carbon footprint of industrial packaging
- Protecting electronic components with ESD-safe packaging
- Economics and ecology of industrial packaging: Pack sustainably!
- Transport packaging: Recyclate, paper & co.

SUSTAINABLE DEVELOPMENT

Circulation 24,300
